CHAPTER 1

INTRODUCTION

1.1 Introduction

Pet adoption gives animals an opportunity to find safe and caring homes. However, information about animals, adopter details, and adoption application progress can be difficult to manage when it is spread across different channels. PawHomes is intended to provide a single web-based place where prospective adopters can explore pets and access account-related features, while administrators can review adoption activity and manage platform records.

The interface presents navigation links such as Home, Pets, Smart Match, Rescue & Lost Pets, About, and Contact. Depending on the signed-in role, additional links such as Favorites, Profile, Dashboard, Admin Portal, and Logout are displayed. The design uses a clean layout, cards, status labels, and forms to make key information easy to find.

1.2 Existing System and Needs

In an unstructured adoption process, prospective adopters may need to search multiple sources to find animals and may have limited visibility into application progress. Staff may also need a central view of applications, users, pet records, verification tasks, and rescue reports. PawHomes addresses these needs through a unified interface for pet discovery and administrative oversight.

1.3 Scope of the Project

- User sign-in and access to an adopter account.
- An adopter dashboard showing application totals, application status, adopted-pet count, and recent applications.
- A profile page for personal details, gender, email address, phone number, and location information.
- A pet catalogue with search and filters for name or breed, species, gender, size, and Tamil Nadu district.
- A shelter administrator login interface, including a demo-login option shown in the local environment.

CHAPTER 2
METHODOLOGY

2.1 Objective

- To provide a convenient interface for discovering pets available for adoption.
- To allow adopters to access a dashboard and review adoption-related activity.
- To provide a profile interface for maintaining personal and location information.
- To make pet discovery easier through search and filtering options.
- To provide administrators with a consolidated view of adoption applications and platform-management sections.
- To present application status and summary counts in a clear format.

2.2 Problem Statement

Prospective adopters need an accessible way to browse pets and understand the information available for each animal. Platform administrators also need an organised view of user accounts, pet records, adoption applications, shelter verifications, and rescue reports. This project aims to bring user-facing and administrative functions together in one web application with role-oriented navigation and structured screens.

2.3 Project Description

1. User Registration & Login Module

Functionalities:

- User registration
- Login and logout
- Email/phone validation
- Password management
- User authentication
- Role-based access for adopter and admin

2. Pet Listing & Discovery Module

Functionalities:

- Display available pets
- Search pets by name or breed
- Filter by:
    - District
    - Species
    - Breed/type
    - Age
    - Size
    - Gender
- Show **pets near selected district**
- Show **other pets across Tamil Nadu**
- View complete pet detail

3. Pet Details Module

Functionalities:

- Breed/type
- Species
- Age
- Size
- Gender
- Health condition

4. Adoption Management Module

Functionalities:

- Submit adoption request
- Store adopter details
- Track adoption status
- View adoption history
- Approve/reject adoption requests
- Update adoption status

5. Adopter Dashboard Module

Functionalities:

- Display total adoption activity
- View adopted/requested pets
- View pet details
- Track delivery
- Check adoption status
- Access route map when available
- View adoption history

6. Delivery & Tracking Module

Functionalities:

- Display delivery status
- Track pet delivery
- Show pickup/delivery location
- Display route map
- Update delivery progress
- Show estimated delivery information

7. Profile Management Module

Functionalities:

- View account information
- Edit personal information
- Update contact details
- Manage address/location
- View adoption-related information
- Change password

8. Admin Management Module

Functionalities:

- Admin login
- Dashboard with summary cards
- Manage pet listings
- Add new pets
- Edit pet information
- Remove/update pet listings

9. Location & District Module

Functionalities:

- Select Tamil Nadu district
- Find nearby pets
- Display pets from other districts
- Store pet location
- Location-based pet discovery
- Route/map integration for delivery

10. Database Management Module

Functionalities:

- Store user details
- Store pet details
- Store adoption applications
- Store delivery/tracking information
- Store district/location data
- Maintain adoption history
- Provide data to adopter and admin dashboards

CHAPTER 4

CONCLUSION

PawHomes is developed to simplify the process of finding and adopting pets by bringing adopters, pets, and shelters together on a single platform. The system provides features such as secure user authentication, profile management, pet listings, search and filtering options, adoption applications, and application tracking. Users can easily view available pets and select suitable ones based on their preferences. The administrative section helps manage pet details, user accounts, shelter information, and adoption records efficiently.

The system aims to make pet adoption more accessible, organized, and convenient for both adopters and organizations. By providing important pet information and maintaining adoption records digitally, PawHomes helps reduce the difficulties involved in the conventional adoption process. The system can be further evaluated through functional testing, database verification, security checks, and proper handling of invalid inputs to ensure a reliable and effective adoption platform.
